According to our (Global Info Research) latest study, the global DUV Lasers market size was valued at USD 84 million in 2023 and is forecast to a readjusted size of USD 157.1 million by 2030 with a CAGR of 9.3% during review period.

A deep ultraviolet (deep UV, DUV) laser is a type of laser that emits light in the deep ultraviolet region of the electromagnetic spectrum, which typically ranges from around 100 nanometers (nm) to 300 nm in wavelength. This region of the spectrum is often referred to as 'deep UV' because it encompasses shorter wavelengths than those found in the visible and near-ultraviolet regions. Deep UV Laser for Semiconductors have a variety of scientific, industrial, and technological applications.

Semiconductor is the dominated application. Deep UV lasers enable high-resolution inspection of wafers, masks and reticles, allowing for the detection of sub-micron defects such as particles, pinholes, scratches, and pattern deviations. The shorter wavelengths of deep UV light enhance the ability to identify defects accurately.
