According to our (Global Info Research) latest study, the global Dyestuff and Pigments market size was valued at US\$ 43320 million in 2025 and is forecast to a readjusted size of US\$ 56850 million by 2032 with a CAGR of 4.0% during review period.

Pigments are colored, black, white or fluorescent particulate organic or inorganic solids which usually are insoluble in, and essentially physically and chemically unaffected by, the vehicle or substrate in which they are incorporated. They alter appearance by selective absorption and/or by scattering of light. Pigments are usually dispersed in vehicles or substrates for application, as for instance in the manufacture of inks, paints, plastics or other polymeric materials. Pigments retain a crystal or particulate structure throughout the coloration process. Dyestuff are intensely colored or fluorescent organic substances only, which impart color to a substrate by selective absorption of light. They are soluble and / or go through an application process which, at least temporarily, destroys any crystal structure by absorption, solution, and mechanical retention, or by ionic or covalent chemical bonds.

China is the largest Dyestuff and Pigments market with about 41% market share. Europe is follower, accounting for about 19% market share.
