According to our (Global Info Research) latest study, the global Dynamic Dispensing Spinner market size was valued at US\$ 440 million in 2025 and is forecast to a readjusted size of US\$ 672 million by 2032 with a CAGR of 6.2% during review period.

In 2025, there were 22,176 dynamic dispensing spin coaters worldwide, with an average selling price of US\$19,300 per unit.

Dynamic dispensing spin coaters are a type of precision spin coating equipment used to prepare uniform liquid-phase thin films on the surface of wafers, glass, photomasks, ceramic slides, metal sheets, or other planar substrates. The equipment delivers photoresist, polyimide, spin-coating glass, spin-coating carbon, dielectric materials, sol-gels, organic semiconductors, perovskite precursor solutions, or other functional liquids to the center of the substrate or a preset trajectory position via manual droppers, metering pumps, syringe pumps, or automatic liquid supply mechanisms with single or multiple nozzles, while the substrate has already begun rotating or is maintaining a set low speed. Subsequently, through coordinated control of parameters such as rotation speed, acceleration, rotation time, liquid supply volume, nozzle movement trajectory, ventilation, and temperature and humidity, the liquid rapidly spreads and thins under centrifugal force to form a thin film with the target thickness, uniformity, and repeatability.
