Dynamic fiber laser marking machine is a high-precision surface processing equipment based on the collaborative work of fiber laser and high-speed galvanometer scanning system. Its core principle is to generate high-energy density pulse or continuous laser beam through fiber laser, and through the rapid deflection of high-speed galvanometer (usually X-Y two-dimensional scanning galvanometer), combined with F-Theta field mirror focusing, the laser beam is dynamically projected onto the workpiece surface in a non-contact manner to achieve high-resolution, high-speed pattern, text or QR code and other identification processing. The equipment utilizes the wavelength characteristics of fiber laser (usually 1064nm) and beam quality advantages (M?
