Abstracts

According to our (Global Info Research) latest study, the global Dynamic Image Particle Analyzer market size was valued at US$ 190 million in 2025 and is forecast to a readjusted size of US$ 331 million by 2032 with a CAGR of 8.2% during review period.

A Dynamic Image Particle Analyzer is a specialized optical particle characterization instrument designed to measure both particle size and particle morphology by capturing images of particles while they are moving through a controlled measurement zone. The system typically combines high-speed cameras, line-scan sensors, telecentric optics, flow cells, dry free-fall or air dispersion modules, in-line probes, illumination units, and automated image-processing software. It can quantify particle size distributions, length, width, projected area, circularity, aspect ratio, convexity, transparency, number concentration, and classification results from direct images of individual particles. Product forms include laboratory dry dynamic image analyzers, wet flow-cell analyzers, flow imaging microscopy instruments, in-line or in-situ process imaging systems, and dynamic imaging accessories integrated with other particle sizing platforms. The core value of this market is the ability to move beyond equivalent particle size toward a richer dataset combining size, shape, particle images, and statistically meaningful single-particle analysis.

Based on our research, the dynamic image particle analyzer market is a small but highly specialized segment within the broader particle characterization industry. Its core value does not lie in replacing laser diffraction, sieving, dynamic light scattering, or optical particle counting in all applications. Instead, its value becomes clear when users need direct visual evidence of individual particles and statistically meaningful morphology data. DIA enables users to quantify particle length, width, circularity, aspect ratio,

convexity, transparency, number concentration, and outlier populations. This is particularly important for non-spherical particles, powders with a small fraction of oversized particles, metal additive manufacturing powders, abrasives, sand, pharmaceutical crystals, biologic subvisible particles, suspensions, emulsions, and process crystallization systems.

From a demand perspective, the most important growth drivers are not traditional particle sizing alone, but the rising need for particle morphology, classification, and visual traceability. Additive manufacturing requires better control of powder sphericity and abnormal particles; battery materials require tighter control of agglomeration, particle breakage, and morphology consistency; biologics require subvisible particle differentiation beyond simple counts; and crystallization processes require real-time insight into crystal growth, breakage, agglomeration, and phase behavior. These demand shifts are moving DIA from an offline laboratory technique toward a broader workflow that includes R&D, QC, process analytical technology, and in-line monitoring.

From a technology perspective, the market is evolving toward more integrated and application-specific systems. Dry free-fall analyzers continue to replace or supplement sieving in granular materials; wet flow-cell and micro-flow imaging platforms are expanding in liquid particle analysis; in-line and in-situ imaging systems are being integrated with process control and automated reaction platforms; and software is becoming a key differentiator through particle classification, batch comparison, anomaly detection, and data-integrity features. As a result, future competition will be shaped not only by optical resolution and size range, but also by sample handling, dispersion robustness, algorithm transparency, regulatory compliance, and application expertise.

This report is a detailed and comprehensive analysis for global Dynamic Image Particle Analyzer market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2025, are provided.

Key Features:

Global Dynamic Image Particle Analyzer market size and forecasts, in consumption value ($ Million), sales quantity (Units), and average selling prices (US$/Unit), 2021-2032

Global Dynamic Image Particle Analyzer market size and forecasts, by Type and by Application, in consumption value ($ Million), sales quantity (Units), and average selling prices (US$/Unit), 2021-2032

Global Dynamic Image Particle Analyzer market shares of main players, shipments in revenue ($ Million), sales quantity (Units), and ASP (US$/Unit), 2021-2026

The Primary Objectives in This Report Are:

To determine the size of the total market opportunity of global and key countries

To assess the growth potential for Dynamic Image Particle Analyzer

To forecast future growth in each product and end-use market

To assess competitive factors affecting the marketplace

This report profiles key players in the global Dynamic Image Particle Analyzer market based on the following parameters - company overview, sales quantity, revenue, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Endress+Hauser Group, Yokogawa Electric Corporation, HORIBA, Ltd., Shimadzu Corporation, METTLER TOLEDO International Inc., Bio-Techne Corporation, Spectris plc, Anton Paar GmbH, Verder Scientific, Sympatec GmbH, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Market Segmentation

Dynamic Image Particle Analyzer market is split by Type and by Application. For the period 2021-2032, the growth among segments provides accurate calculations and forecasts for consumption value by Type, and by Application in terms of volume and

Market segment by region, regional analysis covers

North America (United States, Canada, and Mexico)

Europe (Germany, France, United Kingdom, Russia, Italy, and Rest of Europe)

Asia-Pacific (China, Japan, Korea, India, Southeast Asia, and Australia)

South America (Brazil, Argentina, Colombia, and Rest of South America)

Middle East & Africa (Saudi Arabia, UAE, Egypt, South Africa, and Rest of Middle East & Africa)

The content of the study subjects, includes a total of 15 chapters:

Chapter 1, to describe Dynamic Image Particle Analyzer product scope, market overview, market estimation caveats and base year.

Chapter 2, to profile the top manufacturers of Dynamic Image Particle Analyzer, with price, sales quantity, revenue, and global market share of Dynamic Image Particle Analyzer from 2021 to 2026.

Chapter 3, the Dynamic Image Particle Analyzer competitive situation, sales quantity, revenue, and global market share of top manufacturers are analyzed emphatically by landscape contrast.

Chapter 4, the Dynamic Image Particle Analyzer breakdown data are shown at the regional level, to show the sales quantity, consumption value, and growth by regions, from 2021 to 2032.

Chapter 5 and 6, to segment the sales by Type and by Application, with sales market share and growth rate by Type, by Application, from 2021 to 2032.

Chapter 7, 8, 9, 10 and 11, to break the sales data at the country level, with sales quantity, consumption value, and market share for key countries in the world, from 2021 to 2026.and Dynamic Image Particle Analyzer market forecast, by regions, by Type, and
