Abstracts

The global Dynamic Light Carpet Headlamp market size is expected to reach \$ 1510 million by 2032, rising at a market growth of 12.8% CAGR during the forecast period (2026-2032).

Dynamic Light Carpet Headlamp is an advanced automotive lighting system that integrates pixel-controlled light sources, projection optics, electronic drivers, thermal management, and vehicle software to create a dynamic carpet-like light field on the road surface ahead of or around the vehicle. Compared with dynamic interactive projection headlamps that emphasize symbols, animations, and broader human-vehicle interaction, this product focuses more on continuously changing road-surface illumination, visible path guidance, lane-edge highlighting, low-speed maneuvering support, and scenario-based light carpet effects, allowing the projected light field to adjust according to driving status, vehicle speed, road environment, and user scenarios. In 2025, the capacity utilization rate was approximately 80%, and the average gross margin was around 33%. Production in 2025 totaled 1.02 million units, with an average price of USD 684 per unit. Upstream primarily consists of DMD chips and MicroLED arrays, with representative suppliers including Texas Instruments, ams OSRAM, and Nichia. The midstream focuses on optical system design, electronic driver integration, dynamic light carpet control, projection algorithm development, pattern programming, thermal management, and vehicle-grade reliability testing. Downstream applications mainly include ICE Vehicles and NEVs, with representative customers including Mercedes-Benz, Audi, AITO, NIO, and other premium automotive brands pursuing intelligent lighting, road-surface guidance, exterior interaction, and differentiated vehicle design.

Dynamic Light Carpet Headlamp should be viewed as a road-surface interaction layer

added to intelligent front lighting, rather than a decorative lighting feature. In premium ICE Vehicles and NEVs, dynamic light carpets can support lane-edge recognition, low-speed maneuvering, pedestrian awareness, welcome scenes, and narrow-road driving guidance. Its application value is strongest when the light field changes with speed, steering angle, ADAS perception, and vehicle status. For suppliers, stronger profitability will come from efficient optical design, reusable light-carpet software, standardized modules, and deeper integration with vehicle control systems. Automakers can use this function to strengthen safety perception and create a more recognizable exterior lighting identity.
