Abstracts

The global Dysphagia Nursing Care Food market size is expected to reach \$ 695 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Dysphagia Nursing Care Food, also known as care food or therapeutic food, is specially designed to meet the nutritional needs of individuals with health conditions that affect their ability to eat regular meals, such as the elderly, people with swallowing difficulties (dysphagia), or those recovering from illness or surgery. These foods are modified in texture, consistency, and nutrient content to ensure they are easy to consume and digest while providing essential vitamins, minerals, and energy needed for healing and maintaining overall health. Dysphagia Nursing Care Food often includes pureed, minced, or soft-textured dishes and can be enriched with protein, fiber, and other nutrients to address specific dietary requirements. The goal is to enhance the patient's quality of life by making mealtime safe, enjoyable, and nutritionally adequate. The price of this product is \$4-7/kg, Gross profit margin is between 15% and 25%.

In the Dysphagia Nursing Care Food (standardized soft-meal) value chain, upstream suppliers provide core ingredients (meat, fish, rice/grains, vegetables), functional inputs for texture and stability (e.g., gelling/thickening agents used within the product formulation, proteins, fats, micronutrients), and packaging materials (retort pouches, trays, cups) alongside processing equipment for cooking, homogenizing, portioning, retorting, and freezing. Midstream manufacturers formulate meals to meet defined texture levels, then produce standardized SKUs through processes such as cooking, pureeing, sieving, shaping, sterilization or freezing, and quality control to ensure consistent texture, safety, and nutrition. Downstream channels include bulk procurement by medical institutions and elderly care facilities (often via foodservice

contractors), retail sales to individuals and families through supermarkets, pharmacies/drugstores, and e-commerce, and in some markets distribution through home-care service providers, with demand ultimately driven by aging populations, dysphagia management needs, caregiver workload reduction, and institutional feeding protocols.
