## Abstracts

The global E-aircraft Tractor market size is expected to reach \$ 172.6 million by 2029, rising at a market growth of 8.0% CAGR during the forecast period (2023-2029).

The growing focus on sustainability and reducing carbon emissions in the aviation industry is a significant driver for Electric aircraft tractors. Electric tugs offer zero-emission operations, helping airports and ground handling service providers reduce their carbon footprint and meet environmental regulations. Electric aircraft tractors provide cost-saving benefits compared to traditional tugs powered by gas or diesel engines. They have lower operating and maintenance costs since they require less fuel and have fewer mechanical parts that require regular maintenance. Additionally, electricity is often cheaper than fuel, resulting in long-term cost savings for operators. Governments and regulatory bodies worldwide are implementing policies and providing incentives to accelerate the adoption of electric vehicles, including electric ground support equipment like aircraft tugs. These initiatives aim to support the transition to cleaner and more sustainable operations in the aviation sector, creating a favorable market environment for Electric aircraft tractors.

This report studies the global E-aircraft Tractor production, demand, key manufacturers, and key regions.
