In this article, E-Bike Service Systems mainly refers to the E-Bike drive motor.

An E-Bike drive motor, also known as an electric bike drive motor, refers to the motor installed on an electric bicycle that provides propulsion to assist or entirely replace the rider's pedaling effort. This motor is typically powered by a battery and its output power is controlled through a control system, driving the rotation of the bike's wheels. The type and design of drive motors can vary based on the manufacturer and the type of electric bike, and they can be categorized as mid-drive motors (mounted in the bike's frame's center), hub-drive motors (mounted on the wheel hub), or crank-drive motors (working in tandem with the rider's pedaling), among others. These motors are designed to provide smooth power output to enable a more effortless riding experience while enhancing the efficiency and performance of the electric bike.

Global key players of E-Bike Service Systems include Shimano, Bosch, Yamaha and Bafang Electric, etc. The top four players hold a share over 70%. Europe is the largest market, has a share about 60%. In terms of product type, Mid-Drive is the largest segment, occupied for a share of about 90%, and in terms of sale channel, OEM has a share about 90 percent.
