According to our (Global Info Research) latest study, the global E-Coat market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

E-coating, also known as electrocoating, electropainting etc. is a high-tech process that has been developed over the last fifty years. The E-coat process was originally developed for applying an anti-corrosive coating over steel car bodies. E-coats processes are used for coating a wide range of consumer goods including hardware, jewellery, eyeglass frames, giftware and many other items.

Users recognize E-coat's ability to paint high production volumes of parts with a unique combination of decoration and protection. Material utilization is close to 100%. This high production efficiency coupled with advanced quality results in lower unit costs.

In the US, the main producers of e-Coat electronic Coating are Axalta Coating Systems, PPG, Valspar, BASF and Nippon Paint, which account for about 90% of the market.
