## Abstracts

According to our (Global Info Research) latest study, the global E-Glass Fiber Needle Mat market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

E-glass fiber needle felt is made of extremely fine E-type glass fiber and then needled by a special needle rolling machine, which results in countless fine holes in the fiber felt, giving this product extremely high heat insulation and sound absorption properties. It is a non-toxic and harmless inorganic material. Compared with traditional centrifugal glass wool and asbestos products, it does not contain any adhesive, does not emit any smell, and does not contain any carcinogens. It is very excellent in terms of heat resistance, tensile strength, toughness, fire resistance, and corrosion. In particular, its heat resistance is four times higher than that of centrifugal glass wool, which can reach 710 degrees C, and its electrical insulation is particularly good. The unique flexibility makes it easy to tailor and cut, and it is a new environmentally friendly product with more characteristics among various existing thermal insulation and sound absorption materials.
