Abstracts

According to our (Global Info Research) latest study, the global E-paper Display Signage market size was valued at US$ 958 million in 2024 and is forecast to a readjusted size of USD 1818 million by 2031 with a CAGR of 9.0% during review period.

E-paper is an electronic device that is designed to look a lot like real paper. Is main difference to a regular display is that is reflects light instead of emitting it. E-paper displays are screens that display text and graphics digitally without losing the positive characteristics of paper. They do not consume much power and, thanks to e-paper technology, are easy on the eyes. Due to the viewing angle stability and high contrast, text can be read very well, especially over a longer period of time, whereas conventional LCD displays lead to eye fatigue in the long run. Since sunlight has little effect on the readability of the E-Ink screen, E-paper displays can be used both indoors and outdoors.

Global key players of E-paper Display Signage include Sharp NEC Display Solutions, E Ink Holdings Incorporated, Seekink, etc. The top three players hold a share about 57%. Asia-Pacific is the largest market, and has a share about 58%, followed by Europe and North America with share 22% and 15%, separately. In terms of product type, Grayscale Display Signage is the largest segment, accounting for a share of 92%. In terms of application, Public Transport is the largest field with a share about 65 percent.
