## Abstracts

Most ionomers are produced via free-radical copolymerization. For example, ethylene is copolymerized with methacrylic and/or acrylic acid by a high pressure process similar to low-density polyethylene. These ionic copolymers have typically a low melting point, improved toughness/flexibility and mechanical strength and when used as films, possess a much higher clarity and gloss and provide superior hot tack, seal strength and puncture resistance than unmodified polyethylene film.

This report studies the global EAA Ionomer production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for EAA Ionomer, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of EAA Ionomer that contribute to its increasing demand across many markets.

The global EAA Ionomer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The largest volume ionomers are copolymers of ethylene and acrylic and/or methacrylic acid. Commercial grades of ethylene (meth)acrylic acid (EAA, EMAA) are available from Dow (Surlyn®), SK (PRIMACOR™), and Honeywell, (Aclyn®).
