Abstracts

The global Early Cancer Screening for Dogs market size is expected to reach $ 335 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

Early cancer screening for dogs is a method of analyzing cancer-related biomarkers that may exist in dogs through blood, tissue or genetic testing, thereby discovering potential tumor risks when there are no obvious symptoms, helping to achieve early diagnosis and early treatment, and improving the cure rate and quality of life of dogs. It is an important preventive measure in the field of pet medicine.

The growth of the early canine cancer screening market is primarily driven by factors such as the aging pet dog population, an increase in breeds prone to cancer, heightened owner awareness regarding preventive healthcare, and continuous advancements in non-invasive testing technologies. As more families regard dogs as integral members of the household, owners are increasingly prioritizing extended lifespans, improved quality of life, and reduced burdens associated with treating advanced-stage cancer; this shift has moved cancer detection from post-symptomatic diagnosis toward routine screening for senior dogs, high-risk breeds, and seemingly healthy dogs. Meanwhile, the maturation of technologies—including blood biomarkers, circulating tumor DNA (ctDNA), molecular urine testing, genetic sequencing, and AI-driven imaging analysis—has made early screening more convenient, less invasive, and suitable for inclusion in annual wellness exams. The expansion of service networks by veterinary hospitals and reference laboratories, the gradual inclusion of advanced testing in pet insurance coverage, and rising pet healthcare expenditures have further stimulated market demand; however, factors such as testing sensitivity, the range of cancer types covered, service pricing, and the diagnostic pathway following a positive

Report Scope

This report studies the global Early Cancer Screening for Dogs demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Early Cancer Screening for Dogs, and provides market size (US$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Early Cancer Screening for Dogs that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Early Cancer Screening for Dogs total market, 2021-2032, (USD Million)

Global Early Cancer Screening for Dogs total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Early Cancer Screening for Dogs total market, key domestic companies, and share, (USD Million)

Global Early Cancer Screening for Dogs revenue by player, revenue and market share 2021-2026, (USD Million)

Global Early Cancer Screening for Dogs total market by Type, CAGR, 2021-2032, (USD Million)

Global Early Cancer Screening for Dogs total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Early Cancer Screening for Dogs market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include IDEXX Laboratories, Antech Diagnostics, VolitionRx, Fujifilm,
