Abstracts

Early rape seed refers to rape seed that is harvested before it fully matures. It is a type of immature rape seed that is typically used for its high oil content and nutritional value. It is harvested early to ensure a higher yield and to avoid the degradation of the seed quality caused by prolonged storage.

According to our (Global Info Research) latest study, the global Early Rape Seed market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

The industry trend for early rape seed is towards increased demand due to its nutritional value and high oil content, which are in high demand in the food and feed industries. Additionally, the growing popularity of organic and sustainable agriculture is driving the use of non-GMO crops like early rape seed, which is considered to be a more environmentally friendly and sustainable option for crop production. In terms of supply, increased demand from Europe and other regions is expected to drive production of early rape seed, particularly in countries with a strong agricultural base and a growing consumer base for organic and sustainable products.
