An Earth Clamp is a type of tool used in electrical and welding works, serving as a grounding clamp. Electrical circuits must be grounded for safety. By using an Earth Clamp, the entire electrical circuit is grounded, preventing electrical leakage and electric shock accidents. The clamp is also made of metal and is sturdy, so it can be used for a long period of time. However, they are often subjected to bending and other forces, which may cause them to deteriorate and break. Regular inspection and replacement are necessary because use of a broken wire can cause electrical leakage and electric shock accidents.
