Abstracts

Earthmoving equipment generally refers to heavy equipment that are extensively used in the construction industry to move large quantities of earth, dig foundations, and landscape areas. Excavators, loaders, and construction tractors are the different types of earthmoving equipment.

Scope of the Report:

This report focuses on the Earth Moving Equipment in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Rapid urbanisation requires investments to improve urban infrastructure. The urbanisation trend will accelerate demand for basic construction equipment. Rapid urbanisation will lead to high demand for residential, commercial, intercity and intra-city mobility infrastructure. The demand for basic construction equipment will continue to grow and will account for a majority of the overall demand. The development of corridors will need huge investment in infrastructure such as roads, ports, power plants and will boost global GDP.

An important market trend that will impel growth is the rising demand for energy-efficient equipment. Construction companies in Saudi Arabia are focusing extensively on sustainable development practices like green building construction. To construct such buildings, construction companies have to minimize the emissions and pollution throughout the project lifecycle, which in turn will augment the need for energy-efficient equipment. This increase in the demand for energy-efficient equipment will compel

manufacturers to develop energy-efficient and technologically advanced earthmoving equipment.

The worldwide market for Earth Moving Equipment is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
