Abstracts

Earth observation satellite is designed for non-military uses, such as monitoring and predicting climatic patterns, assessing damage during natural disasters, estimation of crop yields, surface geology mapping, and mineral deposits, and availability of water sources. It works at an altitude of 800 Km using remote-sensing techniques to collect data on the chemical, physical, and biological aspects of the earth system. This method permits the measurement of geology parameters of the world from the orbit with the use of high-resolution cameras and advanced sensors. It conjointly facilitates the management of earth's natural resources in a resourceful manner.

SCOPE OF THE REPORT:

This report studies the Earth Observation Satellite market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Earth Observation Satellite market by product type and applications/end industries.

The satellite-based earth observation sector is witnessing a rapid growth during the forecast period. However, there are some shortcomings in operating performance of the earth observation satellite, such as high initial investment cost, coordination among different databases, reusability, customization, and isolation of various satellites from one another.

The global Earth Observation Satellite market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
