According to our (Global Info Research) latest study, the global Earth Tester market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The earth tester is a commonly used instrument for measuring and measuring the grounding resistance, and is used to measure the grounding resistance or the resistance of the ground electrode and the soil resistivity. The power system equipment is grounded through the ground electrode. Since the ground resistance will be very low if any fault current occurs, it will be transferred to the ground through the ground electrode or tester. In addition, it protects systems and personnel from high current damage. It is also an indispensable tool for electrical safety inspection and ground engineering completion acceptance. In recent years, due to the rapid development of computer technology, the ground resistance tester has also penetrated a large number of microprocessor technologies.
