According to our (Global Info Research) latest study, the global Earthquake Early Warning Transmitter market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

An earthquake early warning transmitter is a device that receives and transmits earthquake early warnings. There are two types of Earthquake Early Warning System (EWS) alerts: warnings and forecasts. A warning is issued for seismic waves detected at multiple stations with an expected maximum intensity of 5 or lower. A forecast is released when P-waves or S-waves exceed 100 gals at any station, with a magnitude of 3.5 or more or an expected maximum intensity of 3 or more. These forecasts are updated for accuracy and transmitted by earthquake early warning transmitters to display predicted seismic intensity and arrival time, controlling devices like elevators and building announcement systems.
