According to our (Global Info Research) latest study, the global Earthquake Isolators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Earthquake isolators, also known as seismic isolators or base isolators, are mechanical devices or systems designed to protect buildings and structures from the damaging effects of ground motion during earthquakes. They work by decoupling the building or structure from the ground motion, allowing it to move independently to absorb and dissipate seismic energy. This helps reduce the forces transmitted to the structure, minimizing damage and increasing safety.
