The global Easy Chewable Softgels market size is expected to reach \$ 255.1 million by 2029, rising at a market growth of 5.4% CAGR during the forecast period (2023-2029).

Chewable softgels are a type of soft capsule that are designed to be chewed, rather than swallowed whole like traditional capsules or tablets. They are typically made using a gelatin shell, which is filled with a liquid or semi-solid formulation containing one or more active pharmaceutical ingredients (APIs) and other excipients. Chewable softgels are commonly used to deliver vitamins, minerals, and other nutritional supplements, as well as over-the-counter and prescription medications. They offer several advantages over other dosage forms, including improved patient compliance and convenience, especially for those who have difficulty swallowing pills. Chewable softgels can be produced in a variety of shapes, sizes, and flavors to enhance patient acceptance and compliance.
