According to our (Global Info Research) latest study, the global Easy-Laser market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The Easy-Laser is a device that uses a laser to perform centering and leveling measurements.

It measures shaft misalignment by irradiating a laser beam onto the rotary axes of connected rotating equipment. Adjustments can be made while checking the parallelism and perpendicularity of equipment and parts. Misalignment in the connection of rotating shafts can distort the shafts and load on the equipment, resulting in malfunctions. Using an Easy-Laser to measure and check the shafts will prolong the life of the equipment. It also improves the efficiency of maintenance and inspection work, thereby reducing costs.
