According to our (Global Info Research) latest study, the global Eccentric Eddy Current Separator market size was valued at US\$ 74.9 million in 2024 and is forecast to a readjusted size of USD 106 million by 2031 with a CAGR of 5.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Eccentric Eddy Current Separator is a highly efficient separation device for separating non-ferromagnetic metals and non-metallic materials. Through the eddy currents and magnetic field forces generated by the eccentrically arranged rotor, the device can effectively separate conductive materials such as aluminum and copper from waste or mixtures. Its design reduces the interference of ferromagnetic materials on the separation efficiency through the eccentric magnetic field layout, and has higher separation accuracy and stability. This separator is widely used in waste recycling, resource reuse and mining processing, and is particularly suitable for processing small non-ferrous metal particles in complex mixtures.
