## Abstracts

The global ECL Narrow Linewidth Laser market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

An ECL (External Cavity Laser) with a narrow linewidth refers to a type of tunable laser that is known for producing a laser beam with an exceptionally narrow spectral linewidth. ECLs achieve this by incorporating an external cavity, typically a diffraction grating or a similar optical component, to provide precise control over the laser's output wavelength. This narrow linewidth is desirable in various applications that require high spectral purity, precision, and stability.
