Abstracts

MEMS microphones and ECM microphones are both capacitive structures with similar principles. The MEMS microphone adopts a semiconductor process chip structure, consisting of a MEMS chip and an ASIC specific integrated chip. Compared with ECM, MEMS microphones have smaller dimensions, higher sensitivity, higher signal-to-noise ratio, and good RF and EMI suppression functions. At the same time, they have good adaptability to digital signal processing circuits. In terms of manufacturing, MEMS microphones can be produced using fully automatic SMT packaging, greatly improving efficiency. Therefore, they are gradually replacing ECM and becoming the mainstream in the trend of miniaturization in consumer electronics.

According to our (Global Info Research) latest study, the global ECM and MEMS Microphone market size was valued at US$ 2053 million in 2023 and is forecast to a readjusted size of USD 3359 million by 2030 with a CAGR of 7.5% during review period.
