Eco-Friendly Composite Deck is an outdoor deck made of sustainable and environmentally friendly materials, designed to reduce the dependence of traditional wooden decks on forest resources and the impact on the environment. This type of deck is usually made of a mix of recyclable materials such as recycled plastics, waste wood fiber or bamboo fiber. It protects forest resources by replacing natural wood, while reducing landfill and pollution of plastic waste. Eco-Friendly composite decks have excellent durability and low maintenance characteristics. They can resist common problems such as rot, insect infestation, and mildew. They have a long service life and are not easy to fade or crack. They do not require frequent oiling or protective treatment, which significantly reduces the maintenance cost and chemical use of the deck.
