Abstracts

The global Eco-friendly Solvent Oil market size is expected to reach \$ 1736 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032). Eco-friendly Solvent Oil is a petroleum-based solvent that undergoes deep hydrotreating and refining, resulting in low sulfur content, low aromatic hydrocarbons (saturated hydrocarbon content >99%), non-toxicity, no odor, minimal ozone depletion potential, and biodegradability. It effectively replaces traditional solvents and offers advantages such as strong solvency, good volatility, and safe use. The upstream supply primarily relies on basic raw materials provided by the petroleum refining industry, including hydrocracked residue oil, straight-run kerosene, and isoalkane raw materials produced from paraffinic oils. Global sales are projected to reach approximately 920,000 tons in 2025, with an average market price of approximately US\$1383.14 per ton. The industry's gross profit margin is in the range of 15%?25%.

The growth drivers of the environmentally friendly solvent industry mainly stem from the rigid constraints of policies and regulations and the upgrading of end-consumer product quality. On the one hand, global VOCs emission reduction policies and stringent chemical regulations such as REACH and TSCA are forcing the paint and coatings, printing ink, and industrial cleaning industries to phase out highly toxic and odorous traditional solvents. On the other hand, the high-end market has generated a significant demand for special solvents with high flash points, low conductivity, and no sensory irritation.

This report studies the global Eco-friendly Solvent Oil production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Eco-friendly Solvent Oil and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
