According to our (Global Info Research) latest study, the global ED Copper Foi for CCL market size was valued at US\$ 5825 million in 2025 and is forecast to a readjusted size of US\$ 9931 million by 2032 with a CAGR of 7.9% during review period.

ED Copper Foil for CCL refers to electrodeposited copper foil specifically engineered for copper-clad laminate (CCL) manufacturing, produced through electrochemical deposition processes that enable precise control over thickness uniformity, grain structure, and surface roughness to meet high-performance PCB requirements. As one of the three core raw materials of CCL, together with resin systems and reinforcement materials such as glass fiber cloth, it is laminated via hot-pressing to form the foundational conductive layer. In 2025, production totaled 333 thousand tons with an average price of \$17,000/ton. The upstream primarily consists of high-purity cathode copper and copper sulfate solution, with representative suppliers including Jiangxi Copper, Tongling Nonferrous Metals, and Freeport-McMoRan. The midstream focuses on electrodeposition processing, surface treatment technologies, and mechanical property optimization. The downstream mainly serves communication, computing and server, and consumer electronics sectors, with major customers such as Huawei, Foxconn, Intel, Apple, and Samsung. The industry's capacity utilization rate in 2025 reached 82%, while the average gross margin was approximately 15%. Growth momentum is supported by expanding big data, AI, and cloud infrastructure, as well as increasing demand for high-frequency, high-density PCBs driven by 5G deployment and continuous upgrades in consumer electronics.
