Safety and performance issues in the electronics industry have increased to such a degree that virtual verification of designs has become an inevitable part of chip manufacturing. The verification process involves testing of electrical and electronic components in various temperature and pressure conditions. Therefore, with the help of EDA software several vendors are able to identify design errors, and the simulation process helps them in understanding their ability to withstand harsh environments and so on.

Scope of the Report:

This report focuses on the EDA in Industrial Electronic in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

EDA vendors have started to provide software on a rental basis. This encourages the adoption of EDA software among SMEs because of a reduced TCO. In addition, vendors have started to provide cost containment commercial software packages that help reduce software license costs and enhance the efficiency of product development cycles.

ESL tools are used by semiconductor manufacturers to design, test, and verify the final product. This enables them to develop a new product at a lesser cost and time with high precision and accuracy. Also, the emergence of FinFET has helped manufacturers in the modeling and fabrication of devices.

The worldwide market for EDA in Industrial Electronic is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
