Non-destructive testing methods are employed in various end use industries associated with metals and welds. The main purpose is to estimate the properties of the materials without damaging them. Eddy Current NDT (Non-Destructive Testing) is one among the various methods used to detect flaws or change in the properties of the materials with the help of eddy current induced in the probe that penetrates into the conductive surface of the test material and shows deflection in the equipment in case of any flaw or crack.

The core manufacturers of Eddy Current NDT Equipment in the world include Olympus, Waygate Technologies and Foerster. The top three companies have about 44 per cent of the market. Asia Pacific is the world's largest market for Eddy Current NDT Equipment with a market share of about 44%, followed by North America and Europe with a market share of 27% and 25%, respectively.
