Abstracts

The global Eddy Current Probe System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Eddy current probes are a non-destructive testing tool. An alternating current is passed through the coils in the eddy-current probe, creating an oscillating magnetic field. When the probe is used on conductive materials such as metal parts, the circulating flow of electrons will pass through the metal material. This in turn generates its own magnetic field, which interacts with the coils in the probe.

This report studies the global Eddy Current Probe System production, demand, key manufacturers, and key regions.
