## Abstracts

According to our latest research, the global Edge AI Gateway market size will reach USD 2551 million in 2031, growing at a CAGR of 19.5% over the analysis period.

An Edge AI Gateway is an intelligent gateway device that integrates edge computing capabilities with artificial intelligence (AI) inference functionalities. It is designed to perform local data processing and smart decision-making close to data sources such as sensors, machines, and cameras. Unlike the traditional model of sending all data to the cloud for processing, an Edge AI Gateway conducts tasks like data acquisition, preprocessing, AI inference (e.g., image recognition, anomaly detection, predictive analytics) directly at the edge. This significantly reduces latency, minimizes bandwidth usage, and enhances data privacy and security. These gateways typically feature powerful processors (such as ARM CPUs, GPUs, NPUs), AI accelerators, and support multiple AI frameworks (like TensorFlow Lite and OpenVINO) and communication protocols (such as 5G, Ethernet, Wi-Fi, LoRa). They are widely used across sectors like industrial automation, smart cities, smart retail, healthcare, traffic management, and security surveillance. With the surging demand for edge intelligence, the market for Edge AI Gateways is experiencing rapid growth.
