## Abstracts

According to our latest research, the global Edge AI Sensing Platform market size will reach USD 2461 million in 2031, growing at a CAGR of 19.5% over the analysis period.

An Edge AI Sensing Platform is an integrated hardware and software system that combines edge computing and artificial intelligence technologies, specifically designed for real-time sensing, data processing, and intelligent analysis near the data source (such as sensors or devices). These platforms typically integrate multiple types of sensors (e.g., visual, audio, temperature, pressure, acceleration) and are equipped with on-device AI inference capabilities. This allows them to perform tasks such as data filtering, feature extraction, anomaly detection, and classification locally, without relying heavily on cloud computing. By moving sensing and AI decision-making to the edge, the Edge AI Sensing Platform effectively reduces latency, minimizes bandwidth usage, enhances system responsiveness, and improves data privacy and security. Widely applied across sectors like industrial monitoring, smart cities, smart retail, autonomous driving, healthcare, and agricultural technology, these platforms are a key enabler for the convergence of the Internet of Things (IoT) and Artificial Intelligence (AI).
