Abstracts

According to our (Global Info Research) latest study, the global Edge Emitting Laser (EEL) Module market size was valued at US\$ 2209 million in 2024 and is forecast to a readjusted size of USD 3695 million by 2031 with a CAGR of 8.5% during review period.

Edge Emitting Laser (EEL) modules are laser emitters based on semiconductor technology, mainly used in optical communications, optical modules, laser printers, laser scanning and sensors. Compared with vertical cavity surface emitting laser (VCSEL), the laser beam of EEL modules is emitted from the edge of the semiconductor device.

The working principle of EEL modules is that when current passes through semiconductor materials, it stimulates the combination of electrons and holes, releases photons, and generates lasers. These laser beams are exported through reflectors or other optical elements, and are transmitted to external application systems after collimation.
