## Abstracts

The global Edible Oil Packaging market size is expected to reach \$ 609 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

In 2025, global edible oil packaging production reached approximately 51 kilotons, the average price is 8000 usd/ton. Edible oil packaging refers to a container system designed and manufactured for the storage, protection, transportation and sale of edible oil. Its main function is to effectively isolate light, oxygen and moisture to maintain the freshness and quality of the oil, while providing convenient access and dumping experience and transmitting brand information. These packages usually have good sealing, chemical stability and certain compressive strength. The core lies in the combination of materials and structures. Ensure the safety and stability of edible oil at all stages of the supply chain, and finally present it on retail shelves with an attractive appearance to consumers.

### Market Concentration and Key Players:

Internationally, the market concentration of edible oil packaging is relatively high, mainly concentrated in developed countries in Europe and America. For example, large manufacturers such as Smurfit Westrock and ALPLA; from a domestic perspective, there is still a lot of room for development in edible oil packaging.

### Manufacturing Processes and Market Trends:

The manufacturing process of edible oil packaging begins with the processing and molding of packaging materials. Plastic particles such as PET are dried and sent to an injection molding machine, which is formed into a bottle blank in a mold. The bottle

blank is then heated and made into the final shape through a blow molding process. Transparent or colored bottle bodies, glass bottles require molten glass to be injected into a mold and annealed, metal cans are made from tinplate through stamping, welding and internal spraying, and then the packaging container will undergo multiple printing processes, such as screen printing or labeling, To complete the brand and information identification, finally in the automatic filling line, after purging, nitrogen filling, filling, capping and sealing, forming a complete package that blocks light and oxygen.

The market trend clearly points to sustainability and functional innovation. Lightweight and recyclable design have become the mainstream. Enterprises are actively developing and using recycled PET or bio-based plastics, and simplifying the cap structure to reduce plastic consumption. Intelligent packaging has begun to be introduced, such as providing traceability information through two-dimensional codes or displaying freshness in combination with flexible display screens. The demand for small-size, portable packaging and bottle nozzle design with precise quantity control function for household consumption is increasing. At the same time, filling technology is also moving towards high speed. Flexible and intelligent development to meet the needs of multi-variety and small-batch production and meet the comprehensive expectations of the market for safety, convenience and environmental protection.
