According to our (Global Info Research) latest study, the global Dry Molasses market size was valued at USD 1216.2 million in 2023 and is forecast to a readjusted size of USD 1561.7 million by 2030 with a CAGR of 3.6% during review period.

Molasses is formed as a byproduct during the production of sugar from cane sugar, it occurs as molasses syrup which is then dried to produce dry molasses using technologies such as spray dry or freeze dry. Dry Molasses is a sweetener which is naturally fortified with nutrients such as vitamin B6, calcium, potassium, copper, iron and magnesium etc.

There are several varieties of molasses syrup produced during sugar production such as light molasses, dark molasses, and blackstrap molasses all having different utilization and properties. Light molasses are the sweetest and used in baking, dark molasses are less sweet and can also be used for baking, blackstrap molasses is dark and thick and contains most vitamins and minerals. There are several associated health benefits of dry molasses consumption such as, it maintains bone health as it contains decent amount of calcium, improves heart health as it contains potassium and promotes better blood circulation and maintains heart health, molasses are rich in antioxidants therefore can also help in prevention of cancer.
