According to our (Global Info Research) latest study, the global EDM Graphite Electrode market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Electrical Discharge Machining (EDM) is an electrothermal method based on the thermal effect of electric current. Its principle is to take advantage of the electrocorrosion phenomenon between the electrode and the workpiece during pulse spark discharge, to remove excess metal and meet the machining requirements of corresponding parts on size, shape, and surface quality. In electrical discharge machining, graphite materials have high strength, high temperature resistance, high electrical conductivity, high corrosion resistance, and excellent thermal shock resistance, and can be used for stable discharge machining. Therefore, they are widely used as electrode materials for manufacturing high-precision parts.
