Effect pigments are embedded in coatings and paints to change the hue or gloss level and to give the target object a certain texture. Unlike classic pigments, effect pigments are flaky. The gloss effect is caused by reflection or interference and not the typical scattering.

They are used in a variety of applications including coatings, personal care products, packaging plastics, inks and many other applications. Effect pigments are used whenever a soft shine, a satin luster or a brilliant metallic appearance are desired.

Global Effect Pigments key players include Altana, BASF, Toyo Aluminium, Merck, Silberline, etc. Global top five manufacturers hold a share over 55%.

Europe is the largest market, with a share about 40%, followed by North America and China, both have a share over 40 percent.

In terms of product, Artificial Mineral Pigments is the largest segment, with a share over 60%. And in terms of application, the largest application is Coatings, followed by Inks.
