Abstracts

EM is an abbreviation of “Effective Microorganism”, is a new compound microbial preparation, composed of photosynthetic bacteria, lactic acid bacteria, yeast, actinomycetes and other 10 more than 80 kinds of microbial compound culture from the flora, formed a complex and stable microbial system, mutual cooperation, the advantages of powerful, extremely powerful.

EM was coined by Professor Dr. Teruo Higa, who developed EM. EM consists of a wide variety of effective, beneficial and non-pathogenic microorganisms produced through a natural process and not chemically synthesized or genetically engineered. It comes in a liquid form.

EM has a broad application. EM has no adverse effects on and is beneficial to plants, animals, and humans. Very simply put, EM lives off our waste while we live off "their waste". Their waste simply translates to a healthy environment for us in that EM becomes inactivated, therefore, a mutual existence can be had. EM only creates the condition for best results, that is, the users should nurture the condition and provide the resources for EM to perform optimally. Microorganisms exist naturally throughout the environment from rock crevices to our internal organs. In our present day environment, putrefactive microorganisms, those types responsible for the rotting of organic matter to maladies in organisms, dominate much of the sphere of the microorganisms.
