## Abstracts

The global Egg Cell Cryopreservation Service market size is expected to reach \$ 3395 million by 2032, rising at a market growth of 11.7% CAGR during the forecast period (2026-2032).

Oocyte cryopreservation is a fertility preservation service that uses medical technology to retrieve healthy eggs from a woman's ovaries, vitrify them in vitro, and preserve them long-term. This service primarily targets two groups: first, women suffering from serious illnesses such as malignant tumors who require radiotherapy or chemotherapy that may damage ovarian function ('medical purpose' cryopreservation); and second, healthy women who wish to postpone childbearing age to preserve their optimal fertility potential for social or personal reasons ('socially motivated oocyte cryopreservation'). The core process includes physical assessment, ovulation induction with medication, egg retrieval surgery, laboratory freezing, and long-term storage in liquid nitrogen at ultra-low temperatures. The goal is to thaw the eggs and use them for in-vitro fertilization to create embryos for pregnancy when needed in the future.

Oocyte cryopreservation has a promising future and is gradually evolving from a niche medical technology into a widely accepted health management option. Its growth is driven by multiple factors: First, changing social attitudes and women's educational and career development needs have led to a general postponement of the optimal childbearing age, increasing the demand for proactive fertility preservation. Second, the maturity of vitrification technology has significantly improved the survival rate and clinical pregnancy rate of thawed eggs, enhancing the reliability of the service. Furthermore, the improvement of relevant laws and regulations and the exploration and intervention of commercial insurance are increasing its accessibility. The market is expected to continue to expand, especially in large cities and among highly educated

women, and will drive the development of the entire industry chain, from assisted reproductive medicine and health consultation to long-term storage management.
