Abstracts

Nature has given the egg a natural package - the shell. Despite its relative strength, the egg is an extremely fragile product and even with the best handling methods, serious losses can result from shell damage. Economical marketing generally requires that eggs be protected by the adoption of specialized packaging and handling procedures.

In consumption market, the growth rate of global consumption is smooth relatively. Europe and North America are still the mainly consumption regions due to the rapid development of economy and consumption concept.

There are many different types of egg packages, which vary both in design and packaging material used. The major materials of egg packaging are molded fiber and plastics. Collection and new applications of waste paper is the ultimate source for the sustainable production of molded fiber packaging products made from renewable resources. Compared to other packaging materials, molded paper is preferred because of certain other factors such as low price, temperature resistance and water resistant properties. It is widely used in the transportation and retailing of eggs.

The worldwide market for Egg Packaging is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
