Abstracts

The processing of egg products includes breaking, filtering, mixing, stabilizing, blending, pasteurizing, cooling, freezing or drying, and packaging. Liquid, frozen, and dried egg products are the major types that are available as whole eggs, whites, yolks, and various blends. These egg products are widely used in the food & beverage industry as ingredients in products such as pasta, noodles, salad dressings, and dairy. The types of egg processing equipment used include egg breakers, egg fillers, egg pasteurizers, and egg handling & storage machines. The market for processed egg products is growing along with the demand for high-quality and cleaner products. In response to the demand, new products are continuously developed, and substantial importance is placed on innovation and product functionality.

SCOPE OF THE REPORT:

This report focuses on the Egg Processing in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. North America constituted the maximum number of egg processing facilities. Europe constituted more than 350 egg processing factories, with the maximum number in Italy. The number of liquid egg processing facilities is more than the dried egg processing facilities. This is because a large number of liquid egg products is consumed as compared to dried and frozen egg products. A complete line of egg processing equipment comprises egg breaker, egg separator, egg pasteurizer, egg drier, egg filler, egg handling, and egg storage.
