Yolk antibodies refer to a variety of antibody proteins physically extracted from the yolks of chicken eggs, which produce specific, functional antibodies if the hens are subjected to targeted immunization; because they come from poultry, they are collectively referred to as yolk antibodies, abbreviated as IgY. A series of functional studies on egg yolk immunoglobulins have shown that their functional characteristics are basically the same as those of immunoglobulins in bovine serum and colostrum. Oral administration of egg yolk immunoglobulins can obtain passive immune protection, thereby helping the body to increase its disease resistance capabilities.
