Egg yolk lecithin is a type of lecithin, a group of compounds primarily containing phospholipids, that is derived from eggs. Egg yolk lecithin has emulsification and lubricant properties, and is a surfactant. It can be totally integrated into the cell membrane in humans, so does not need to be metabolized and is well tolerated by humans and nontoxic when ingested; some synthetic emulsifiers can only be excreted via the kidneys.

Egg yolk lecithin is usually extracted chemically using ethanol, acetone, petroleum ether but not benzene or hexane due to restrictions on residual solvents by the pharmaceutical regulations.

Global core egg yolk lecithin manufacturers include Lipoid GmbH, Fresenius Kabi etc. The top 3 companies hold a share about 80%. Europe is the largest market, with a share about 65%, followed by Japan and China with the share about 15% and 12%. In terms of product, acrylic binder is the largest segment, with a share over 65%. And in terms of application, the largest application is advertising and image pigment ink, followed by textile pigment ink.
