Transformer Insulation Pressboard are essential for ensuring the safe and efficient operation of electrical transformers. They provide electrical insulation, mechanical support, and protection from moisture, chemicals, and thermal degradation. EHV (Extra High Voltage) and UHV (Ultra High Voltage) transformers are types of transformers used in electrical power systems for the transmission of electrical power at very high voltages. They play a crucial role in the efficient transfer of electricity over long distances, minimizing power losses. Typically, EHV transformers are designed to handle voltages between 220 kV to 765 kV. UHV transformers are designed for even higher voltage levels, generally above 800 kV, with some systems operating at voltages up to 1,200 kV or more. This report cover insulation paper, pressnoard and component for EHV and UHV transformer application.
