The global Ejector Venturi Scrubber market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Ejector venturi scrubber is an air pollution control device used to remove pollutants, such as dust, particles, and gases, from industrial exhaust gases or air streams. The scrubber works by using the venturi effect, which involves a high-velocity liquid stream creating a pressure drop, causing pollutants to be forced into contact with the liquid, where they are captured and removed. The ejector in the scrubber helps to enhance the entrainment and removal of pollutants.
