## Abstracts

The global Elastic Sensitive Element market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In the working process of the sensor, elastic sensitive elements are often used to convert the measured parameters such as force, pressure, moment, and vibration into strain or displacement, and then convert the strain or displacement into electricity through various conversion elements. The form of the elastic sensitive element can be a solid or hollow cylinder, a circular ring of equal cross-section, a cantilever beam of equal cross-section or equal strength, a torsion tube, etc., or a spring tube (Bourdon tube), diaphragm, diaphragm box, bellows, thin-walled cylinder, thin-walled hemisphere, etc. The elastic sensitive element occupies a very important position in the sensor, and its quality directly affects the performance and accuracy of the sensor. In many cases, it is even the heart of the sensor.

This report studies the global Elastic Sensitive Element production, demand, key manufacturers, and key regions.
