The Elastic Sleeve Pin Coupling with Brake Wheel is a mechanical transmission device that relies on the clamping force of pin groups to create a frictional torque at the contact surfaces, transmitting torque through the compression of rubber elastic sleeves. This coupling integrates a brake wheel, making it suitable for medium to low-power transmission systems with good base rigidity, high alignment accuracy, light impact loads, and minimal damping requirements. The rubber-sleeved pins positioned in flange holes provide a stable connection between the coupling halves, commonly applied in smaller shaft transmission systems.
