According to our (Global Info Research) latest study, the global Elastin Product for Cosmetics market size was valued at US\$ 7.54 million in 2025 and is forecast to a readjusted size of US\$ 24.96 million by 2032 with a CAGR of 18.9% during review period.

Elastin products for cosmetics are skincare ingredients derived from natural or bioengineered elastin proteins that help improve skin elasticity, firmness, and hydration. As a key structural protein in the dermis, elastin supports skin resilience and reduces the appearance of fine lines and sagging caused by aging. In cosmetic formulations, elastin is often hydrolyzed for better absorption and combined with collagen, peptides, or moisturizing agents to enhance anti-aging effects. These products are widely used in creams, serums, masks, and other personal care applications targeting youthful and healthy-looking skin. In 2024, global elastin products for cosmetics production reached approximately 4,015 kg, with an average global market price of around US\$ 1,501 per kg.

The key driver of elastin products for cosmetics is the growing consumer demand for anti-aging and skin-rejuvenating solutions, as elastin helps improve skin elasticity, firmness, and hydration. Rising awareness of skin health, increasing disposable income, and the expanding use of elastin in premium skincare formulations are further fueling the market. In addition, technological advancements in bio-extraction and recombinant production of elastin are making it safer, more effective, and more accessible for cosmetic applications.
